

tonik

Energy for the switched on

Role Title

Senior Developer and Developer

Salary

Competitive

Bonus

Up to 10% of salary based on individual and team performance

Who are Tonik?

Tonik is a business that aims to re-write the rule book within the energy industry. We believe in offering renewable, clean, affordable energy to the whole of the UK. What's more, we are on a mission to help our members to reduce their energy bills by 50% over the next 5 years. You see, energy companies have spent too long taking advantage of their customers. We are providing a greener, cleaner, better alternative.

What we are looking for

We are looking for passionate Senior Developers and Developers to help us deliver our products and services to members. We are a fast-growing team based in a fantastic office in central Birmingham.

This is an amazing opportunity - you'll be working with motivated, fun, experienced and passionate technology people on some exciting new products, you won't be sorting out endless legacy as we believe in continuous improvement to our products and architecture!

The development team is growing fast and there will initially be 2 Scrum/Kanban teams to work with although this will grow over the next 12 months. This is a great opportunity to be part of a growing team, to really shape your technology career, to work with some cutting-edge technology alongside very talented developers in a fantastic business culture. We believe that Agile is an optimum way to deliver good software, and are loosely using Scrum and Kanban approaches, but we're not wedded to the manual!

We believe in using the best of what we can find, both in processes and technology, to deliver the best outcome, and constantly refine it. If something doesn't work, change it. We are a very collaborative team, we pair when we need to and we are always working together to improve personally and as a team. If you prefer to work in isolation, move on!

What you will be doing

- The successful candidate must be able to work in a very close and collaborative team and be comfortable mixing with people from a wide range of backgrounds and experience.
- You will get the chance to help design and fashion the companies architecture as well as play an active role in improving our day to day process' through the use of technology.
- We are looking for people with a highly analytical mind who can not only deliver the technology to support our products and featured, but someone who can help shape what those products and features should be.
- For more senior roles, you will have a good understanding of decoupled architectures and the use of queues, as well as wider knowledge of Node.js and associated frameworks and libraries.

- Opportunities exist in our Product team to work on larger projects as well as our Platform team to help deliver small changes that make a big, and immediate impact on our productivity. In reality, you'll spend time in all teams!

- You will be a solid developer with experience of .Net C# or Node.js, experience working with Javascript and have used testing methods employed in Agile software development (TDD, BDD, E2E).

- Experience of continuous integration, knowledge of service bus and service orientated architectures and experience of working within an Azure environment would also be great!

- Understanding and appreciation of the technical approaches to software development, you know what good Agile software practices look like! You'll really "get it" not just be a "scrum manual" fanatic!

- Excellent written and verbal communication skills with proven ability to communicate enthusiastically, clearly and concisely to groups and individuals.

- Must be highly motivated, be able to work on own initiative and not afraid to take a risk now and again!

Why work for Tonik?

We value our people more than anything, we don't expect our staff to care about our company without us caring about them first. We look after you in the hope that you will show the same care to our members. Not only are we caring, but we are fun! We pride ourselves on having one of the best office environments in Birmingham. Also, we're at the forefront of doing something rather different in the energy industry - Smart is an enabler and part of a much bigger picture for us (...think solar, battery, EV charging, etc.). We'd love you to be part of it!
